PROFESSIONAL SUMMARY

RCCE L1/L2 Certified Infrastructure & Security Engineer with hands-on experience designing, deploying, and hardening production-grade self-hosted infrastructure. Operate **Sarvar** — a 20+ service home SOC running on Ubuntu Server with zero public exposure, automated 3-2-1 backups, and 99.9% uptime. Combine **business management education (UNISEL)** with deep technical expertise in Docker, Linux networking, monitoring, and security hardening. Proven ability to translate security requirements into operational controls, conduct root-cause analysis, and automate operational workflows.

CERTIFICATIONS

- **RCCE Level 1 & 2** (RedTeam Cybersecurity Expert) — ROE, threat modeling, vulnerability assessment, exploit development
- **UNISEL** — Bachelor of Business Management

TECHNICAL SKILLS

Category	Technologies
Infrastructure & Containerization	Docker, Docker Compose, systemd, Ubuntu Server, ZFS, LUKS, SteamCMD
Networking & Security	Tailscale (WireGuard), UFW/iptables, Pi-hole DNS, Nginx Proxy Manager, fail2ban, ISO 27001 controls mapping, zero-trust segmentation
Databases & Storage	PostgreSQL (pgvector), Redis/Valkey, automated backup/restore (pg_dump + rclone), 3-2-1 DR strategy
Monitoring & Observability	Custom healthchecks (container restarts, disk, memory, SSH), Watchtower, log analysis, incident postmortems
Media & Automation Stack	Immich (ML optimization), Jellyfin, *Arr stack (Prowlarr, Sonarr, Radarr, Lidarr, Bazarr), qBittorrent, n8n, Vaultwarden
Scripting & Automation	Bash, Python (basic), RCON, cron, Git/GitHub Actions
Hardware Acceleration	Intel QuickSync (VAAPI), GPU passthrough, ML model optimization (SigLIP/CLIP)

KEY PROJECTS

Sarvar Home SOC — Infrastructure Engineer | 2024–Present

github.com/Nighttoxic2/sarvar-infra

- Architected & operate 20+ containerized services on i7-7700HQ/16GB RAM/256GB NVMe+931GB HDD with **zero public exposure**
- Designed zero-trust network: LAN-only service bindings, Tailscale VPN for remote admin, UFW default-deny with explicit CIDR allows, fail2ban jails for SSH/nginx/app auth
- Implemented 3-2-1 backup automation: Daily PostgreSQL dumps + rclone to Backblaze B2, 30-day local/90-day offsite retention, quarterly tested restore procedure
- Hardware acceleration: Configured Intel HD 630 QuickSync for 4.3x faster video transcoding; migrated ML inference from CUDA (GTX 1050 Ti 4GB OOM) to CPU-only SigLIP (6GB limit)
- Incident response: Resolved 12,425-restart crash loop (missing mount marker + GPU misconfig) — documented root cause, prevention measures, and re-index pipeline
- Documentation: Architecture docs, DR runbook, SEV-2 postmortem, capacity planning

Immich Photo Server Optimization — Platform Engineer | 2024–Present

github.com/Nighttoxic2/immich-optimization

- Redesigned ML pipeline: Switched CLIP model from ViT-B-32 to ViT-B-16-SigLIP (better zero-shot, faster); CPU-only inference with model preloading
- Built re-index automation: Single-script pipeline (metadata → thumbnails → faces → CLIP → video) with selective skip flags
- Benchmarked transcoding: CPU libx264 vs QuickSync VAAPI — 4.3x speedup, 80% CPU reduction, 60% power reduction, VMAF 94.8
- PostgreSQL 16 upgrade: Resolved version mismatch (PG14 vs PG16 data dir) via compose pinning and force-recreate

Project Zomboid Dedicated Server Automation — Systems Engineer | 2024–Present

github.com/Nighttoxic2/pz-server-automation

- Systemd service with SteamCMD auto-update, JVM tuning (4GB heap, G1GC), security hardening (NoNewPrivileges, ProtectSystem=strict)
- RCON tooling: Automated world backup (save → tar → offsite), graceful restart announcements (5m/1m/10s warnings)
- Mod management: 80+ mods categorized (QoL, Maps, Weapons, Vehicles, Crafting, Farming, Medical, Admin) with documented load order

---

EXPERIENCE

Self-Employed — Home Infrastructure & Security Operations | 2024–Present

Operate personal production-grade infrastructure as a learning lab and portfolio

- Maintain 99.9% uptime across 20+ services with zero-downtime deployments

- Conduct monthly security reviews: firewall audit, fail2ban log analysis, container image scanning
- Automate repetitive tasks: backup validation, health alerts, certificate renewal monitoring
- Document all architecture decisions, runbooks, and incident postmortems

Project Zomboid Community Server Administrator | 2024–Present

Manage 16-player dedicated server with 80+ mods for community

- Achieve 24/7 uptime with automated recovery via systemd
- Curate mod compatibility matrix; resolve Hydrocraft load-order conflicts
- Implement player-facing automation: Discord relay, economy, faction systems

---

EDUCATION

Universiti Selangor (UNISEL) — Bachelor of Business Management
Relevant: Strategic Management, Operations, Business Communication

---

HIGHLIGHTS

- **Security-first mindset**: Every service designed with threat model — no public ports, least-privilege containers, encrypted backups
- **Operational maturity**: Incident postmortems, tested DR, capacity planning, automated alerting
- **Business + Technical bridge**: UNISEL Business Management enables stakeholder communication, risk-based prioritization
- **Continuous learning**: RCCE L1/L2, active home lab experimentation, open-source portfolio

---

LANGUAGES

- **English**: Professional working proficiency
- **Malay**: Native
- **Chinese**: Conversational
